

Tools and Technology as a Driver for Successful Digitalisation

Comprehensive analysis of your current technology landscape and the best tools and technology for your digitalisation challenges

Digitalisation changes are driven by people (mindset), processes and technology. Choosing the right technology at the right time will substantially influence the success of your digitalisation efforts. Changes from digitalisation affect the daily work and tasks of employees. To foster acceptance among the workforce, the tools and technology should work for those people – not the other way around.

enable2grow establishes a set of digitalisation goals with you, including quick wins that can be achieved by using a specific set of tools or technologies. We conduct an in-depth analysis of your technology landscape and current tools, to establish a detailed roadmap of necessary steps that can be derived including technology stack, tools, APIs, etc. to achieve the goals that we define.

With an initial workshop and working closely together we ensure you receive:

- A comprehensive list of digitalisation goals
- Quick wins that can be achieved by using the right tools
- A well-defined roadmap of actions in terms of technology, setup and implementation

“A well-defined roadmap of steps to be taken to reach the digitalisation goals as well as a comprehensive technology stack and defined set of tools ensure a smooth transition in your digitalisation efforts.”

Florian Wilken | Enabler, Digital Transformation and Technology Expert

Florian Wilken supports his clients as a strategic consultant in areas such as digital transformation, innovation and business building by applying his extensive entrepreneurial experience together with his deep knowledge of digital technology. → [in](#)
