

AI now, but how?

AI in real world applications – beyond the hype

AI as a whole and Large Language Models specifically are eating the world. So it seems. In many areas they do, in others there's more hype than substance. It's hard to tell the one from the other.

At enable2grow, we offer AI expertise that blends real-world technical expertise with a deep understanding of product development and process optimization. Our team has hands-on experience building custom AI tools and products, as well as leading companies through successful AI integration.

Our Services:

- Strategic AI Planning: We work with you to develop a clear AI strategy, identifying opportunities for automation, product innovation, and improved customer experiences.
- Prototyping: We work with your team or external partners on rapid prototypes to explore your specific use-cases and validate the assumptions within the shortest possible time.
- Solution Development: Once the prototypes have proven their merits, we assist you in developing the custom solution and its integration into your processes and infrastructure.
- Team Development: We guide you in assembling a skilled team to support your AI initiatives, ensuring seamless implementation and scalability.
- End-to-End Support: From prototyping to production, we support or lead the entire process, focusing on achieving tangible business results.

“Building AI solutions that provide real value is hard. Develop a sound strategy around opportunities, understand your requirements, prototype to prove AI can actually help – and then build the right team to support the strategy execution.”

Eckart Burgwedel | Enabler & Product Executive

Eckart has extensive experience building AI-powered and digital products. With a background in law, software engineering, and entrepreneurship, he has excelled in product innovation, business modeling, and technical implementation. He has developed several AI tools and is currently building a medical AI solution. → [in](#)
